

InfoSecure Enterprise Server Protection was built with usability in mind. Management of InfoSecure ESP as a disaster recovery solution for your servers is as simple as a few mouse clicks to monitor and control a volume of storage from 1TB to 480TB across a single platform. The concept is simple: save money, have room to grow, and make it easy to manage.

## Continuous Data Protection

Continuous data protection is setup on the servers that are critical to your operation. All data on these servers is copied to InfoRelay cloud storage systems located in one of InfoRelay's other data centers for geographic diversity. After the initial server seed is captured, InfoSecure ESP copies /only the changes made /to your server's hard disk (or RAID array) in real time to provide multiple precise restore points in the event of a failure or disaster. Storage is optimized by deleting the oldest snapshots first so only the newest set of data is kept on file for restore points.

## Data Integrity

Before changes are sent off-site to InfoRelay's cloud storage network, ESP encrypts data in transit via SSL. Within each metropolitan market, backup data is configured to ride over InfoRelay's private inter-site fiber optic connectivity, providing absolute security and keeping your data off of the public Internet. ESP also encrypts data before it is stored, ensuring that your data remains inaccessible by anyone other than you.

## What are the Benefits?

- Continuous protection from data loss
- More available time for other tasks that would have otherwise been devoted to recreating lost data
- Efficient backups allow for less lag time
- Backup to the cloud ensures that your data is never lost
- Private networks ensure that data never touches the public internet
- Peace of mind knowing that your servers are protected

	ESP Copper	ESP Bronze	ESP Silver	ESP Gold	ESP Platinum
Amount of Storage	100 GB	250 GB	500 GB	1 TB	2 TB+
List Price per Machine Backed Up (Monthly)	\$30.00	\$30.00	\$20.00	\$20.00	Custom
List Price (Monthly)	\$225.00	\$350.00	\$400.00	\$500.00	Custom

## Key Features

- SQL module allows for table restoration as opposed to entire data base restoration
- Bare metal restores lower the rebound time to bring a device back to production
- High compression levels allow for storing more restore points using less storage space
- Typical compression ratios are 2:1
- Easy to use web interface for client management with automated task management and reporting for all protected devices
- Portable disk safes allow for movement of data from server to server
- Browse and select files to exclude from by setting policies
